

Acer palmatum 'Atropurpureum'

Red Leafed Maple

Description

Small dense tree with attractive year round colour. Leaves are 5 lobed, rich crimson red in spring, bronze green in summer and rich crimson red again in autumn. Flowers are inconspicuous and the winged seeds (samaras) are borne in pairs. Adaptable to a wide range of soil types but prefers a moist, well drained soil. Makes a stunning feature tree and is excellent in containers. Plant in a protected area as hot summer winds may stress the tree and scorch the leaves. Benefits from regular deep watering, especially in summer months. Mulch well to retain moisture.

Specifications

Dimensions

Height: 3 to 4m, **Width:** 5m

Aspect:

Part shade

Origin

Native to Asia

Pests & diseases

Aphids may be a problem on new growth in Spring.

Typical sizes

25ltr, 45ltr, 100ltr
